

AI ASSIGNMENT-6.5

Name : D.Varshitha

Hall No. : 2303A52268

Batch : 36

Task Description #1 (AI-Based Code Completion for Conditional

Eligibility Check)

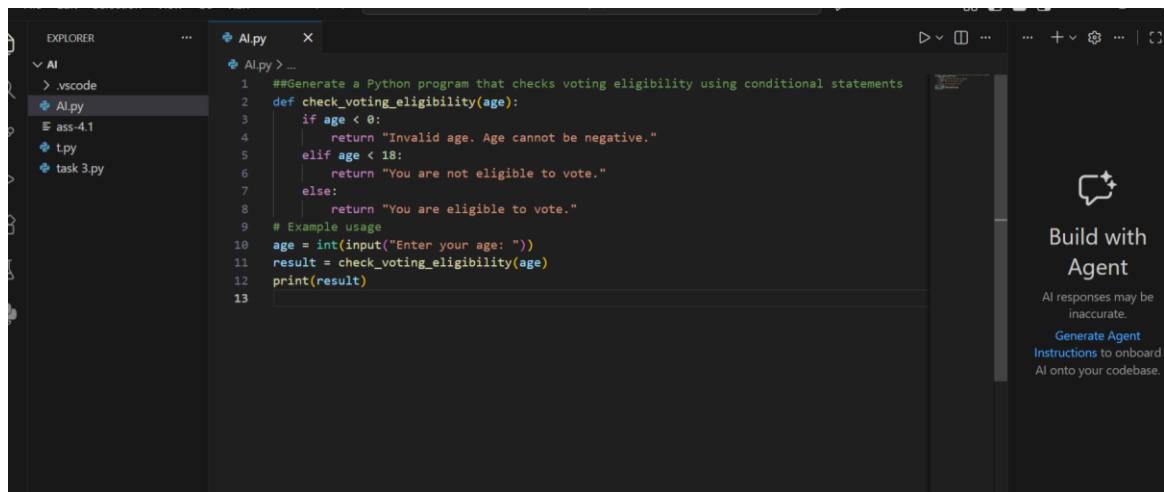

Task: Use an AI tool to generate eligibility logic.

Prompt:

“Generate Python code to check voting eligibility based on age and citizenship.”

Expected Output:

- AI-generated conditional logic.
- Correct eligibility decisions.
- Explanation of conditions.

The screenshot shows the VS Code interface with the Explorer sidebar open, displaying files like AI, .vscode, AI.py, ass-4.1, tpy, and task 3.py. The AI.py file is selected in the Explorer and is currently being edited in the main editor area. The code generated by the AI is as follows:

```
##Generate a Python program that checks voting eligibility using conditional statements
def check_voting_eligibility(age):
    if age < 0:
        return "Invalid age. Age cannot be negative."
    elif age < 18:
        return "You are not eligible to vote."
    else:
        return "You are eligible to vote."
# Example usage
age = int(input("Enter your age: "))
result = check_voting_eligibility(age)
print(result)
```

To the right of the editor, there is a sidebar with the heading "Build with Agent". It includes a note that "AI responses may be inaccurate.", a "Generate Agent" button, and instructions to "Instructions to onboard AI onto your codebase".

Output:

The screenshot shows the VS Code interface with the following details:

- Explorer View:** Shows a folder named "AI" containing ".vscode", "AI.py", "ass-4.1", "tpy", and "task 3.py".
- Code Editor:** Displays the file "AI.py" with the following code:

```
1  ##Generate a Python program that checks voting eligibility using conditional statements
2  def check_voting_eligibility(age):
3      if age < 0:
4          return "Invalid age. Age cannot be negative."
5      elif age < 18:
```
- Terminal:** Shows the output of running the code:

```
You are eligible to vote.
PS C:\Users\reddy\OneDrive\Desktop\AI> & c:\Users\reddy\AppData\Local\Microsoft\WindowsApps\python3.13.exe c:/Users/reddy/OneDrive/Desktop/AI/AI.py
Enter your age: 19
You are eligible to vote.
PS C:\Users\reddy\OneDrive\Desktop\AI>
```
- AI Assistant Panel:** On the right, there is a panel titled "Build with Agent" with the following text:

```
AI responses may be inaccurate.
Generate Agent
Instructions to onboard AI onto your codebase.
```
- Bottom Status Bar:** Shows file path "In 13, Col 1, Spaces: 4, UTE: 0, CRLF: 1, Python", defaultInterpreterPath 3.13.0 final.0, and Go Live buttons.

Task Description #2(AI-Based Code Completion for Loop-Based String Processing)

Task: Use an AI tool to process strings using loops.

Prompt:

"Generate Python code to count vowels and consonants in a string

using a loop."

Expected Output:

- AI-generated string processing logic.
- Correct counts.
- Output verification.

The screenshot shows the VS Code interface with the following details:

- Explorer View:** Shows a folder named "AI" containing ".vscode", "AI.py", "ass-4.1", "tpy", and "task 3.py".
- Code Editor:** Displays the file "AI.py" with the following code:

```
13  ##Generate Python code to count the number of vowels and consonants in a given string using
14  ##The program should take a string as input from the user and display the total count of vo
15  def count_vowels_and_consonants(input_string):
16      vowels = "aeiouAEIOU"
17      vowel_count = 0
18      consonant_count = 0
19
20      for char in input_string:
21          if char.isalpha(): # Check if the character is a letter
22              if char in vowels:
23                  vowel_count += 1
24              else:
25                  consonant_count += 1
26
27      return vowel_count, consonant_count
28  # Example usage
29  input_string = input("Enter a string: ")
30  vowels, consonants = count_vowels_and_consonants(input_string)
31  print(f"Number of vowels: {vowels}")
32  print(f"Number of consonants: {consonants}")
```
- Terminal:** Shows the output of running the code:

```
Number of consonants: 5
PS C:\Users\reddy\OneDrive\Desktop\AI>
```
- AI Assistant Panel:** On the right, there is a panel titled "Build with Agent" with the following text:

```
AI responses may be inaccurate.
Generate Agent
Instructions to onboard AI onto your codebase.
```
- Bottom Status Bar:** Shows file path "In 33, Col 1, Spaces: 4, UTE: 0, CRLF: 1, Python", defaultInterpreterPath 3.13.0 final.0, and Go Live buttons.

Output:

The screenshot shows the Visual Studio Code interface with the following details:

- File Explorer (Left):** Shows files in the current workspace, including `.vscode`, `AI.py`, `ass-4-1`, `t.py`, and `task 3.py`.
- Code Editor (Top Center):** Displays the Python script `AI.py` which counts vowels and consonants in a string.
- Terminal (Bottom):** Shows the output of running the script with the command `thon3.13.exe`. The user enters the string "Ashwitha", and the script outputs the number of vowels (3) and consonants (5).
- Build with Agent (Right):** A sidebar with the title "Build with Agent" containing options like "powershell" and "Generate Agent".
- Bottom Status Bar:** Shows the current file (`AI.py`), line (Ln 33), column (Col 1), and other system information.

Task Description #3 (AI-Assisted Code Completion Reflection)

Task)

Task: Use an AI tool to generate a complete program using classes, loops, and conditionals.

Prompt:

“Generate a Python program for a library management system using classes, loops, and conditional statements.”

Expected Output:

- Complete AI-generated program.
 - Review of AI suggestions quality.
 - Short reflection on AI-assisted coding experience.

The screenshot shows the Visual Studio Code interface with a dark theme. The Explorer sidebar on the left lists files: AI, .vscode, Al.py, ass-4.1, tpy, and task 3.py. The Al.py file is open in the main editor area, displaying Python code for a Library Management System. The code defines a Book class with methods for initialization, string representation, and adding books to a library. It also includes a check_out_book method. The status bar at the bottom indicates the code is at line 61, column 5, and the default interpreter path is 3.13.9.final.0.

```
#Generate a complete Python program for a simple Library Management System using classes, Al.py
class Book:
    def __init__(self, title, author):
        self.title = title
        self.author = author
        self.is_available = True

    def __str__(self):
        status = "Available" if self.is_available else "Checked Out"
        return f"{self.title} by {self.author} - {status}"

class Library:
    def __init__(self):
        self.books = []

    def add_book(self, book):
        self.books.append(book)
        print(f"Book '{book.title}' added to the library.")

    def display_books(self):
        if not self.books:
            print("No books in the library.")
            return
        print("Books in the library:")
        for book in self.books:
            print(book)

    def check_out_book(self, title):
        for book in self.books:
            if book.title == title:
                if book.is_available:
                    book.is_available = False
                    print(f"You have checked out '{book.title}'.")
                    return
                else:
                    print(f"Sorry, '{book.title}' is currently checked out.")
                    return
        print(f"Book '{title}' not found in the library.")

def return_book(self, title):
    for book in self.books:
        if book.title == title:
            if not book.is_available:
                book.is_available = True
                print(f"You have returned '{book.title}'.")
                return
            else:
                print(f"'{book.title}' was not checked out.")
                return
    print(f"Book '{title}' not found in the library.")

def main():
    library = Library()
    while True:
        print("\nLibrary Management System")
        print("1. Add Book")
        print("2. Display Books")
        print("3. Check-Out Book")
```

The screenshot shows the Visual Studio Code interface with a dark theme. The Explorer sidebar on the left lists files: AI, .vscode, Al.py, ass-4.1, tpy, and task 3.py. The Al.py file is open in the main editor area, displaying Python code for a Library Management System. The code now includes a main function that prints a menu and calls the check_out_book and return_book methods. The status bar at the bottom indicates the code is at line 88, column 5, and the default interpreter path is 3.13.9.final.0.

```
class Library:
    def check_out_book(self, title):
        for book in self.books:
            if book.title == title:
                if book.is_available:
                    book.is_available = False
                    print(f"You have checked out '{book.title}'.")
                    return
                else:
                    print(f"Sorry, '{book.title}' is currently checked out.")
                    return
        print(f"Book '{title}' not found in the library.")

    def return_book(self, title):
        for book in self.books:
            if book.title == title:
                if not book.is_available:
                    book.is_available = True
                    print(f"You have returned '{book.title}'.")
                    return
                else:
                    print(f"'{book.title}' was not checked out.")
                    return
        print(f"Book '{title}' not found in the library.")

def main():
    library = Library()
    while True:
        print("\nLibrary Management System")
        print("1. Add Book")
        print("2. Display Books")
        print("3. Check-Out Book")
```

The image displays two side-by-side screenshots of the Visual Studio Code (VS Code) interface, both showing a Python file named `Al.py` in the editor.

Top Screenshot:

- Editor Content:** The code implements a simple Library Management System. It defines a `Library` class and a `main` function. The `main` function prints a menu and loops until choice 5 is selected. It handles choices 1 through 4 by adding, displaying, checking out, or returning books respectively. An invalid choice leads to a re-prompts. The code ends with a goodbye message.
- AI Panel:** A sidebar on the right titled "Build with Agent" includes a speech bubble icon, a note about AI responses being inaccurate, and buttons for "Generate Agent" and "Instructions to onboard AI onto your codebase".
- Bottom Status Bar:** Shows the line number (Ln 113), column (Col 5), spaces (Spaces: 4), encoding (UTF-8), CRLF, Python interpreter path (defaultInterpreterPath: 3.13.9.final.0), and the date/time (23-01-2026 11:38).

Bottom Screenshot:

- Editor Content:** The same `Al.py` code as above, but with an additional line at the end: `if __name__ == "__main__": main()`.
- Bottom Status Bar:** Shows the same information as the top screenshot, including the date/time (23-01-2026 11:38).

Output:

The screenshot shows the VS Code interface with the following details:

- Explorer View:** Shows files in the AI folder, including AI.py, ass-4.1, tpy, and task 3.py.
- Code Editor:** Displays the AI.py file with the following code:

```
108     print("Invalid choice. Please try again.")  
109  
110     if __name__ == "__main__":  
111         main()  
112  
113  
114
```
- Terminal:** Shows the output of running the script:

```
Enter book author: c:\Users\reddy\AppData\Local\Microsoft\WindowsApps\python3.13.exe c:/Users/reddy/OneDrive/Desktop/AI/AI.py  
Book 'python' added to the library.  
  
Library Management System  
1. Add Book  
2. Display Books  
3. Check Out Book  
4. Return Book  
5. Exit  
Enter your choice (1-5): 1  
Enter book title: Python Basics  
Enter book author: john  
Book 'Python Basics' added to the library.  
  
Library Management System  
1. Add Book  
2. Display Books  
3. Check Out Book  
4. Return Book  
5. Exit  
Enter your choice (1-5):
```
- AI Assistant Panel:** On the right, there is an "AI" panel titled "Build with Agent". It includes a message about AI responses being inaccurate, a "Generate Agent" button, and instructions to onboard AI onto the codebase.

Task Description #4 (AI-Assisted Code Completion for Class-

Based Attendance System)

Task: Use an AI tool to generate an attendance management class.

Prompt: “Generate a Python class to mark and display student attendance using loops.”

Expected Output:

- AI-generated attendance logic.
- Correct display of attendance.

The image shows two side-by-side screenshots of the Visual Studio Code (VS Code) interface, both displaying Python code related to student attendance management. The top screenshot shows the initial state where the code defines a Student class and an AttendanceSystem class. The bottom screenshot shows the code being run, with a main() function that prompts the user for the number of students and days, and then iterates through each day to mark student attendance.

```
113     ##Generate a Python class to mark and display student attendance using loops.
114     ##The program should allow marking students as present or absent and display the attendance
115
116     class Student:
117         def __init__(self, name):
118             self.name = name
119             self.attendance = []
120
121         def mark_present(self):
122             self.attendance.append("Present")
123
124         def mark_absent(self):
125             self.attendance.append("Absent")
126
127         def display_attendance(self):
128             print(f"Attendance for {self.name}:")
129             for i, status in enumerate(self.attendance, start=1):
130                 print(f"Day {i}: {status}")
131
132     class AttendanceSystem:
133         def __init__(self):
134             self.students = []
135
136         def add_student(self, student):
137             self.students.append(student)
138
139         def display_all_attendance(self):
140             for student in self.students:
141                 student.display_attendance()
142
143
144
145     def main():
146         attendance_system = AttendanceSystem()
147
148         # Input validation
149         num_students = int(input("Enter the number of students: "))
150
151         for _ in range(num_students):
152             name = input("Enter student name: ")
153             student = Student(name)
154             attendance_system.add_student(student)
155
156         num_days = int(input("Enter the number of days to mark attendance: "))
157
158         for day in range(1, num_days + 1):
159             print(f"\nMarking attendance for Day {day}")
160             for student in attendance_system.students:
161                 while True:
162                     status = input(f"Is {student.name} present? (y/n): ").strip().lower()
163                     if status == 'y':
164                         student.mark_present()
165                         break
166                     elif status == 'n':
167                         student.mark_absent()
168                         break
169                     else:
170                         print("Invalid input! Please enter 'y' or 'n'.")
```

The screenshot shows the Visual Studio Code interface with the following details:

- File Explorer:** Shows files in the AI folder: AI.py, ass-4.1, tpy, and task 3.py.
- Code Editor:** The AI.py file is open, displaying Python code for an attendance system. The code includes functions for marking present and absent students, and a main loop for user input.
- AI Panel:** A sidebar on the right is titled "Build with Agent". It includes a message stating "AI responses may be inaccurate.", a "Generate Agent" button, and "Instructions to onboard AI onto your codebase".
- Bottom Status Bar:** Shows the current line (Ln 179, Col 1), spaces used (Spaces: 4), encoding (UTF-8), and line endings (CRLF). It also displays the Python interpreter path (defaultInterpreterPath: 3.13.9.final.0), Go Live buttons, and system status (ENG IN, 11:51, 23-01-2026).

Output:

The screenshot shows two instances of the Visual Studio Code (VS Code) interface. Both instances have the same workspace open, featuring an Explorer sidebar on the left containing files like 'AI', '.vscode', 'Al.py', 'ass-4.1', 'tpy', and 'task 3.py'. The main editor area displays a Python script named 'Al.py' with the following code and output:

```
145 def main():
    PS C:\Users\reddy\OneDrive\Desktop\AI> & c:\Users\reddy\AppData\Local\Microsoft\WindowsApps\python3.13.exe c:/Users\reddy\OneDrive\Desktop/AI/AI.py
    Enter the number of students: 4
    Enter student name: Ashwutha
    Enter student name: Harshini
    Enter student name: Akshitha
    Enter student name: varshitha
    Enter the number of days to mark attendance: 4

    Marking attendance for Day 1
    Is Ashwutha present? (y/n): y
    Is Harshini present? (y/n): y
    Is Akshitha present? (y/n): y
    Is varshitha present? (y/n): y

    Marking attendance for Day 2
    Is Ashwutha present? (y/n): n
    Is Harshini present? (y/n): y
    Is Akshitha present? (y/n): y
    Is varshitha present? (y/n): y

    Marking attendance for Day 3
    Is Ashwutha present? (y/n): y
    Is Harshini present? (y/n): n
    Is Akshitha present? (y/n): n
    Is varshitha present? (y/n): y

    Marking attendance for Day 4
    Is Ashwutha present? (y/n): y
    Is Harshini present? (y/n): y
    Is Akshitha present? (y/n): y
    Is varshitha present? (y/n): y
```

The status bar at the bottom of both windows indicates the file is Python, the interpreter path is '3.13.9.final.0', and the date and time are '23-01-2026 11:51'. A floating 'Build with Agent' panel is visible on the right side of both windows, providing options to 'Generate Agent' and 'Instructions to onboard AI onto your codebase'. The interface is dark-themed.

The screenshot shows the Visual Studio Code interface with the following details:

- File Explorer:** Shows files like `AI.py`, `ass-4.1`, `t.py`, and `task 3.py`.
- Code Editor:** Displays a Python script (`AI.py`) with AI-generated code completion. The code prints attendance records for two students: Akshitha and varshitha over four days.
- Terminal:** Shows the command line prompt `PS C:\Users\reddy\OneDrive\Desktop\AI>`.
- Right Panel:** Features an "AI" sidebar with a "Build with Agent" section, a note about AI responses being inaccurate, and a "Generate Agent" button. It also includes a text input field for instructions and a "Describe what to build next" button.
- Bottom Bar:** Includes standard OS icons for search, file operations, and system status.

Task Description #5 (AI-Based Code Completion for Conditional Menu Navigation)

Task: Use an AI tool to complete a navigation menu.

Prompt: “Generate a Python program using loops and conditionals

to simulate an ATM menu.”

Expected Output:

- AI-generated menu logic.
- Correct option handling.
- Output verification.

The screenshot shows two instances of the Visual Studio Code (VS Code) interface, demonstrating the integration of AI features. Both instances have a dark theme.

Top Instance:

- Explorer View:** Shows files in the workspace, including `.vscode`, `AI`, `ass-4.1`, `Al.py`, `tpy`, and `task 3.py`.
- Code Editor:** Displays the `Al.py` file containing a Python script for an ATM menu. The code includes logic for withdraw, exit, deposit, and check balance options.
- Right Panel:** Features an "AI" icon with a speech bubble, a "Build with Agent" button, and a message stating "AI responses may be inaccurate." It also includes "Generate Agent" and "Instructions to onboard AI onto your codebase".
- Bottom Status Bar:** Shows the current line (Ln 222, Col 5), spaces (Spaces: 4), encoding (UTF-8), and interpreter path (defaultInterpretorPath: 3.13.9.final.0). It also includes "Go Live" and "ENG IN" status indicators.

Bottom Instance:

- Explorer View:** Similar to the top instance, showing the same workspace files.
- Code Editor:** Displays the `Al.py` file with the same code as the top instance. A cursor is positioned at line 218, which contains the condition `if __name__ == '__main__': atm_menu()`.
- Terminal:** Shows the output of the Python interpreter. The terminal window title is `python3.13`. The output text is:

```
Please select an option (1-4): 1
Your current balance is: $1000.00

ATM Menu:
1. Check Balance
2. Deposit
3. Withdraw
1. Check Balance
2. Deposit
3. Withdraw
4. Exit
Please select an option (1-4): 2
Enter amount to deposit: $1000
$1000.00 deposited successfully.
```
- Right Panel:** Features an "AI" icon with a speech bubble, a "Build with Agent" button, and a message stating "AI responses may be inaccurate." It also includes "Generate Agent" and "Instructions to onboard AI onto your codebase".
- Bottom Status Bar:** Shows the current line (Ln 222, Col 5), spaces (Spaces: 4), encoding (UTF-8), and interpreter path (defaultInterpretorPath: 3.13.9.final.0). It also includes "Go Live" and "ENG IN" status indicators.

The screenshot shows a Microsoft Visual Studio Code (VS Code) interface with an AI integration. The main area displays Python code for an ATM menu system. The sidebar includes an 'EXPLORER' view showing files like 'AI.py', '.vscode', 'ass-4.1', 't.py', and 'task 3.py'. A central panel shows the code for 'AI.py' with line numbers 187 to 222. The right side features an AI interface with a message input field, a 'Build with Agent' button, and instructions about AI responses being inaccurate. The bottom status bar shows file details like 'Ln 222, Col 5' and 'defaultInterpretePath: 3.13.9.final.0', along with system icons and a date/time stamp '23-01-2026 11:55'.

```
187     def atm_menu():
188         balance = 1000
189         print("Welcome to the ATM!")
190         while True:
191             print("Please select an option:")
192             print("1. Deposit")
193             print("2. Withdraw")
194             print("3. Check Balance")
195             print("4. Exit")
196             choice = input("Enter your choice (1-4): ")
197             if choice == '1':
198                 amount = float(input("Enter amount to deposit: "))
199                 balance += amount
200                 print(f"${amount:.2f} deposited successfully.")
